

Solutions Thru Software is your trusted partner in learning, productivity, and testing. Our learning, productivity, and testing systems provide integrity in examinations, lower costs, and increase office efficiency.

### *Examiner*

Efficient, user-friendly, knowledge testing

- Proven and adaptable
- Efficient and affordable testing
- Reliable, and backed with outstanding service

The driving public expects and deserves licensing systems that offer convenient and efficient tests while making sure cheaters don't succeed. *Examiner* offers a highly adaptable knowledge testing system that is secure, efficient and makes the process of offering and taking tests better for everyone.

*Examiner* is used every day across North America in the most demanding driver's license testing scenarios. Through many years of continuous service, our system has adapted to just about every language, test process, or network platform imaginable. We're confident *Examiner* will provide the outcomes you need: accountable and efficient processes, a productive testing office, and best of all, satisfied customers.

Many of our clients discover that *Examiner* dramatically improves the testing experience. With paper tests, clients typically complete every question before waiting anxiously

for grading. Should they fail the exam, questions, and disputes often require your staff to address the needs of one client while others continue to wait.

With *Examiner's* quick pass and quick fail capabilities, your clients have immediate feedback as they progress through the exam. They answer as many questions as you determine necessary to indicate a pass, and they're done. Clients also know as soon as they've failed and with computer based grading, there is far less debate about accuracy.

The net result is an office environment in which valuable staff time is focused on providing efficient services to satisfied clients.

Solutions Thru Software offers *Examiner* as part of our comprehensive set of automated testing solutions. Take a look at our road test and scheduling systems - *RoadsScholar* and *Scheduler* - and you'll find affordable technology that increases productivity and satisfaction.

“ We are very pleased with the product, the process and our received value. The project was managed professionally and with great expertise.

Our team is using the product daily and it is meeting our needs and expectations. We are very happy with our purchase. ”

# Examiner

## features

Solutions Thru Software's *Examiner* system is an extremely feature-rich product. Exams are fully randomized. Applicants sitting at adjacent kiosks will find themselves completing different exams with questions and answers in different orders. System capabilities include:

### *Adaptability*

Solutions Thru Software has discovered that no two jurisdictions implement the *Examiner* system in exactly the same manner. Our clients have different networks, security concerns, databases, business models, language needs and financial resources. STS works with you to ensure your operational requirements are met while remaining within budget.

### *Languages*

The *Examiner* system is capable of implementing virtually every written language on record. To date STS has implemented over 35 languages. It can be noted that this includes the pictorial font languages of Chinese and Japanese, as well as the very difficult to implement right to left languages of Arabic and Farsi. The *Examiner* system is also capable of implementing American Sign Language in either standardized hand fonts or through the use of video playback signing.

### *Multiple Platforms*

- Distributed Software Solutions
- Web (browser-based) Solutions
- Hybrid Solutions

### *Test Methods*

- Automated (multiple form types)
- Oral (all languages)
- Paper (all languages)
- Scanners (for paper tests)

### *Applicant Aids*

- High Resolution Imagery
- Full Motion Video
- Multiple Languages (all languages, including: pictorial fonts, right to left and American Sign Language)
- Oral Exams (all languages)

### *Efficiency Modes*

- Time Limits
- Quick Pass
- Quick Fail

### *Flexible Interfaces*

- Image Formats
- Sound Formats
- Video Formats
- Database Interfaces
- Network Interfaces

### *Additional Devices*

- Scantron Scanners
- Finger Print readers
- Bar Code Readers
- Magnetic Stripe Readers
- High Quality and High Capacity Printers
- Digital Imaging Systems
- Biometric Readers
- Scheduling Systems
- Zip Code Verification Systems
- Queuing

### *Reporting*

- Full reporting features are included
- Sophisticated Automatic Question Pool Validation & Analysis
- Office and Equipment Efficiency Reporting
- Graphic and Color-coded Reports for Quick Interpretation
- Ad-hoc Reporting

### *Administration*

- Active Directory Integration
- System Monitoring
- System Security Policy and Password Control
- Question and Algorithm Creation
- Image Creation or Addition
- Sound File Recording
- Distribution of New Question Pools or Software Releases

### *Open Control Interface*

Solutions Thru Software's Open Control Interface (OCI) provides a comprehensive suite, which makes it easy to connect to other systems and interface with other modules and third party software.
