

Solutions Thru Software is your trusted partner in learning, productivity, and testing. Our learning, productivity, and testing systems provide integrity in examinations, lower costs, and increase office efficiency. *RoadsScholar* improves the integrity and authenticity of driving tests to ensure road tests are conducted according to your rules.

RoadsScholar

Today's vision of the classic road test

- Secure and reliable
- Affordable
- Easy to learn and use

Nobody wants to share the road with a driver who cheated to pass a road test. *RoadsScholar* puts an end to cheating with an affordable, high-tech, GPS-enabled tablet your examiners use on the road. *RoadsScholar* is secure, efficient, and makes the process of offering and taking tests better for everyone.

RoadsScholar is a tablet computer that your examiners use before, during and after the skills test. Notes and observations of the examiner are recorded, while the computer tracks routes, and more. This data is easily compiled to become a solid record of every individual's road test.

The advantages of this system stretch far beyond the increase in office efficiency you'll experience. The broader state justice system devotes hundreds if not thousands of hours each year to corrective measures when unlicensed or fraudulently licensed drivers are caught or involved in accidents. The measures you take to increase the strength of licensing processes pay off down the road. Further, *RoadsScholar* meets federal audit requirements for covert monitoring.

Perhaps the greatest long-term benefit you want is traffic safety. *RoadsScholar* helps you be sure the drivers who prepare for and pass your road test know the rules, and were tested appropriately.

Solutions Thru Software offers *RoadsScholar* as part of our comprehensive set of automated testing solutions. Take a look at our knowledge testing and scheduling systems - *Examiner* and *Scheduler* and you'll find affordable technology that increases productivity and satisfaction.

The *RoadsScholar* solution provides a comprehensive skill testing system that will provide comfort for both the examiner and applicant. The look is already familiar for the examiner as the electronic forms have been designed to have the same appearance as paper test forms.
