

Effective, affordable and reliable testing services are the foundation of our reputation. Over the years, we've embraced technological advances and shifting client expectations to ensure our suite of testing products continues to set the industry standard. Our core testing products - *Examiner* and *RoadsScholar*- are in active service providing millions of tests each year.

As service expectations shift, we're now deploying our testing expertise to enable remote and third party testing with security assurances equivalent to office-based systems. This best-of-both-worlds approach offers unparalleled efficiency and client-friendly service.

Examiner

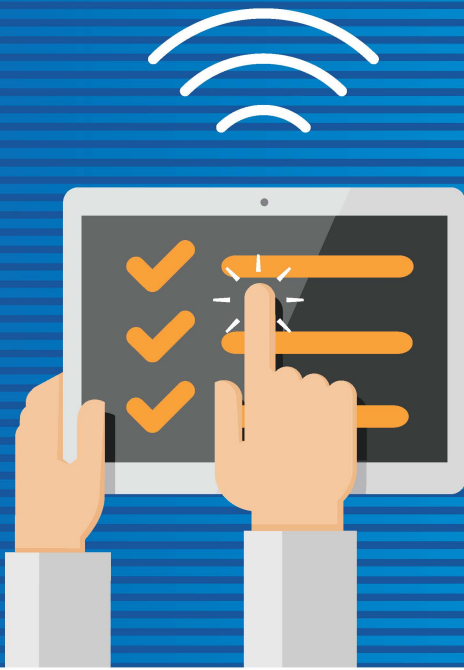

An efficient, user-friendly knowledge testing system

- Proven and adaptable
- Efficient and affordable
- Reliable and supported

Examiner is used every day across North America in the most demanding driver's license testing scenarios. Through many years of continuous service, our system has adapted to just about every language, test process, or network platform imaginable. We're confident *Examiner* will provide the outcomes you need: accountable and efficient processes, a productive testing office, and best of all, satisfied customers.

With *Examiner's* quick pass and quick fail capabilities, your clients have immediate feedback as they progress through the exam. They answer as many questions as you determine necessary to indicate a pass, and they're done. Clients also know as soon as they've failed and with computer-based grading, there is far less debate about accuracy.

- ✓ *Accurate.*
- ✓ *Secure.*
- ✓ *Fast.*

RoadsScholar

Today's vision of the classic road test

- Secure and reliable
- Affordable
- Easy to learn and use

RoadsScholar is a tablet computer that your road examiners use before, during and after the skills test. Notes and observations of the examiner are recorded, while the computer tracks testing routes. This data is easily compiled to become a solid record of every individual's road test.

The advantages of this system stretch far beyond the increase in office efficiency you'll experience. The broader state justice system likely devotes hundreds if not thousands of hours each year to corrective measures when unlicensed or fraudulently licensed drivers are caught or involved in accidents. The measures you take to increase the strength of licensing processes pay off down the road.

WebTest

A bridge between home and office

- Reduce the need for office-based services
- User-friendly
- Secure

Why struggle to provide an extensive network of offices and employees when you can now provide secure testing through remote or third-party computers? Solutions Thru Software's WebTest service offers remote testing while maintaining the integrity of your processes with sophisticated algorithms, random re-testing, and state-of-the-art validation capable of looking for pattern cheating methods.

Web-based testing ensures clients are provided with exams identical to those administered in an office. Our experience with testing systems ensures that all applicants are tested fairly and equally, regardless of whether they are tested at your office, a 3rd party proctoring facility or other remote setting.
